Aim

To design an E-Commerce Electronics Store webpage using HTML5 by implementing form elements and media elements such as input fields, select, fieldset, audio, video, embed, iframe, and progress bar.

Description

This experiment implements a E commerce electronic store webpage using HTML5 form and media elements. It uses tags such as <form>, <input>, <label>, <fieldset>, <select>, <textarea>, and <progress> to collect and display user information. Media tags such as <audio>, <video>, <embed>, <iframe>, and <img> are used to display gardening-related media and content. The webpage is organized using , headings, paragraphs, hyperlinks, and HTML comments.

Procedure

1. Create a new HTML5 file named **index.html**.
2. Add the basic HTML structure using <html>, <head>, <title>, and <body>.
3. Create the **E Commerce Electronic Store** layout using , headings, paragraphs, images, and hyperlinks.
4. Add form elements using <form>, <fieldset>, <label>, <input>, <select>, and <textarea>.
5. Use <progress> to display gardening skill levels.
6. Add media using <audio>, <video>, <embed>, and <iframe>.
7. Save the file and open it in a browser.
8. Verify that all form and media elements are displayed and working correctly.
